

Professional scent delivery system: SONIC

PRODUCT SPECIFICATIONS

General overview

SONIC is an innovative device that diffuses high-quality fragrances into the air, in the form of dry steam (micro -nebulization).

Thanks to its refined design, compact size and very low noise level, it is the ideal solution for users with high expectations, such as hotels, lounges, SPAs, offices , shops, showrooms.

SONIC programmer allows to select operating time ranges. It also allows intensity of fragrance diffusion to be accurately adjusted (either by remote control or directly on the front panel), thus taking into account the needs and constraints of the user.

Performances

SONIC can cover up to 500 m².

Intensity : Diffusion can be adjusted from 1 to 20 (either via Bluetooth or directly on the screen).

Time ranges : Possibility to select operation days and time ranges. All these settings can be done via Bluetooth.

Refills and fragrances

Size of refills : 850ml

Technical data

SONIC	
Covered Area:	500 m ²
Consumption:	5,3 ml / hour
Refill:	850 ml
Internal Power:	DC 12V
Power:	6W
